

Data Distribution Systems

The advances in communication network and RF technologies have allowed us to develop high-end, real-time data link training solutions for improved situational awareness for military applications.

Supported by a superior innovative data link system, Prescient has developed the cutting edge all-in-one network combat information system - Enhanced Combat Information System (ECIS). The advances in the technology front have enabled efficient and robust distribution of intelligence information. Tapping onto the high performance and adaptive network, our ECIS, simultaneously paints the combat picture for operators, tactical picture for field commanders, and strategic picture for area commanders. This real-time and accurate depiction of ground truth enables better resource allocation which in turn, ensures the survivability and co-ordination among fighting forces.
